

A world leading plant access and permit system that ...

Improves your business bottom line

PAS is an investment that delivers real operational and financial returns to businesses operating industrial plants. It is a fully integrated Permit Administration System with a proven ability to deliver significant savings across both operational and business levels. It represents a solid business investment.

The costs of an accident

Accidents are costly in many ways for all organisations. Beyond the tragic cost of injury, or even death, there are steep financial penalties. In one instance a company was fined in excess of \$100,000 (Aus) for an incident that involved a fatal injury to a worker, before even factoring in the cost of compensation and other litigation. The accident could well have been prevented if PAS had been in place.

Minimising the likelihood of accidents happening in the first place represents a direct financial benefit to any organisation. The direct costs of damage to personnel and plant are just the start. Investigations of each incident are time consuming, production is impacted, insurance is affected, worker confidence is lost and employee productivity can drop.

In the real world PAS has demonstrated that it can help businesses achieve zero permit breaches. This translates into minimisation of accidents and injury, and optimisation of plant efficiency.

FINANCIAL BENEFITS

- ▶ Improved plant utilisation – reduced down time
- ▶ Streamlined permit process time and accuracy
- ▶ Reduction in any direct financial cost related to worker injury
- ▶ Reduction in indirect cost via investigation and possible litigation
- ▶ Reduction in insurance premiums
- ▶ Initial installation cost typically recovered within initial 12 months of operation

Reduced planning and outage time

PAS helps to significantly reduce the time taken to plan permits and isolations by incorporating Standard and Total Isolation Lists and Master Isolation Statements. These pre-planned isolation lists provide rapid access to isolations for specific plant items and are crucial time-savers in a large outage.

In fact in one such outage, a large industrial operation utilising PAS was able to ensure zero permit breaches, zero injuries and reduced outage time, saving millions of dollars. This measurable type of return on investment is available to all users of PAS.

A commitment to best practice

Perhaps most importantly, investing in PAS demonstrates to your employees, stakeholders, insurance companies and others that you are serious about providing the safest, yet most efficient workplace possible.
